

HYPACK® Sub-bottom

A Software Package Designed for the Acquisition and Processing of Sub-bottom Profiling Data

HYPACK® Sub-bottom is our sub-bottom profiling (SBP) software package designed for marine geophysical, engineering & geotechnical site surveys, dredging, mining applications. It's a simple and easy-to-use solution for all your Sub-bottom profiling survey requirements.

Analog SBP Data Acquisition in HYPACK® SURVEY

The package has a comprehensive global geodesy model and a simplified hardware setup with the ability to setup up the preferred positioning systems together with numerous analog and digital sub-bottom profiling systems.

HYPACK Sub-bottom currently supports the following SBP systems:

- Single channel Analog SBP (pinger, chirp, boomer, bubble pulser, sparker & airgun).
- Simultaneous dual channel Analog SBP (e.g. simultaneous acquisition of pinger/boomer data).
- EdgeTech (2000 & 3000 Series).
- Innomar SES – 2000.
- GeoAcoustics GeoPulse Plus Chirp.
- Knudsen Pinger & Chirp.
- Teledyne Odom Chirp III.
- Older Benthos systems.
- Specialty Devices Inc.
- SyQwest (B2010/SB3510HD & StrataBox).

Easy to Configure & Acquire Sub-bottom Profiling Data

The software is intuitive to configure by following a few basic steps: Firstly define the project geodesy, configure the survey hardware, import background charts (ENCs & web maps), plan the survey lines then start the survey program to acquire the data. Within the survey program the SBP system can be further configured & tuned.

- Sub-Bottom Profiler: HYPACK® Sub-bottom supports numerous SBP systems, both analog and digital, from the industry's leading manufacturers.
- Accurate positioning for hull-mounted, towed or systems on unmanned vehicles (AUV or ROV). Hull-mounted systems require only a simple GPS. For towed systems, HYPACK® reads any of over a dozen cable counters, and performs layback calculations or USBL/LBL acoustic positioning can be utilized. Separate (AUV, ROV) navigation files (raw or EDT) are also supported in the full HYPACK® MAX package.
- Two SBP systems, no interference: A sophisticated triggering system enables simultaneous acquisition of two different SBP systems with no acoustic interference between the systems.

Dual SBP acquisition in HYPACK® SURVEY with no acoustic interference between the SBP systems. Note the positions of the sensors in relation to the vessel.

Sub-bottom processor showing data with digitized interpretation.

Survey Acquisition Control

- Allow for real-time view of all sensor data.
- View boat and survey tracks along-side the scrolling sub-bottom profiling data.
- Display options include unipolar vs bipolar displays and controls for color together with band-pass filtering and TVG.
- The data is stored in SEG-Y format.

Processing

- Loads large datasets.
- Supports SEG-Y and JSF data formats. Reads most third party SEG-Y files
- Digitize layers, pick targets and export to ASCII files.
- Apply gain (automatic and user-defined TVG) & band pass filtering.
- Bottom tracking and swell correction.
- Adjust sound velocity in water and sediment.
- Apply HYPACK tide files.
- View SBP data and interpretations in a 3D fence diagram.

Exporting Data & Final Products

- DXF file with layer information.
- Export All Format files.
- Export XYZ ASCII data for all reflectors.
- Export fence diagrams for 3D view of data.
- Plot data in HYPLIT.
